

Banking on Lenovo to keep customer services running reliably

Wenzhou Minshang Bank

Established in 2015 to help small and micro businesses, Wenzhou Minshang Bank serves customers in predominantly rural and agricultural areas in Zhejiang Province. To ensure that services are always available, the bank modernized its IT infrastructure with powerful Lenovo ThinkSystem SR950 and SR650 servers.

Customer Problem

Wenzhou Minshang Bank relies on its IT infrastructure running reliably to deliver customer services—but its existing server farm was outdated, which threatened to impact operations. It was time for an upgrade.

Lenovo Solution

The bank deployed a new, modern server infrastructure based on Lenovo ThinkSystem SR950 and SR650 systems, working closely with Lenovo to migrate workloads over to the new hardware.

Business Impact

With high-performance Lenovo ThinkSystem servers and a five-year manufacturer warranty for hardware and software, Wenzhou Minshang Bank is confident that it can keep customer services running smoothly.

“Lenovo’s products are stable and reliable, and the service response is timely and professional.”
